# LAKE RIPLEY GLADIOLI

**T**HIS IS THE SEVENTH year I am growing and breeding gladioli. Here in the lake region of Southern Wisconsin we grow these beautiful flowers to perfection. Every summer I try out hundreds of varieties from the best hybridizers of this country and Europe. Those I offer in this list are some of the best. The modern gladiolus is a wonder. Long spikes of magnificent blossoms that often measure five and six inches in diameter. And such a range of gorgeous colors. They are the most stately decorative plant for the garden and there is no better cut flower for the home. If spikes are cut and placed in water when first bud opens, they will last a week or ten days.

Any soil that will grow potatoes will grow gladioli. Plant bulbs in well prepared soil about five inches deep and four inches apart in rows or beds. Make successive plantings from April till last of June. They bloom about three months after planting. Bulbs should be dug before the ground freezes and stored in a dry frost-proof place.

All bulbs sent prepaid at prices quoted. Remittances must accompany all orders. Send your order early for Lake Ripley Quality Bulbs and you will get select, strong, healthy, bulbs that will yield large blossoms.
